GAS FIRES 2016

At the heart of your home

Welcome to Flavel

Today BFM Europe is the fastest growing domestic fire producer in the country with an unequalled reputation for quality and service. Every Flavel branded gas fire is developed and manufactured in Britain at our purpose built, state-of-the-art facility in Stoke-on-Trent.

See page 7 for details about our 7 year guarantee

At Flavel we know how important it is to create a stylish and relaxing living environment. That's why we've developed this collection of affordable gas fires to complement all tastes and lifestyles. I believe our success stems from a combination of innovative design, investment in technology and the highest quality manufacturing standards. As a result all Flavel gas fires carry a 7 year guarantee to reflect my belief in their quality and durability. This brochure has been designed to make the purchase of your new Flavel gas fire as simple as possible. I hope you will find it both informative and inspiring.

bsi. Product Testing & Certification

All our gas fires are independently tested, approved and verified by the British Standards Institution (BSI).

The BSI is an independent organisation. They are not owned by the government, industry or shareholders, which means that they can be totally objective with regards testing and certification. This gives their assessments more authority than those of an organization that has a vested interest in promoting its members.

They have some of the most experienced and knowledgeable staff in the world and are recognised internationally for their technical expertise, quality services and in-depth knowledge of gas, electrical, oil and solid fuel product testing and certification.

The wide-ranging capability of their testing facilities and the broad expertise and knowledge of their testing and certification staff ensures our products are rigorously tested with the utmost integrity.

highefficiency

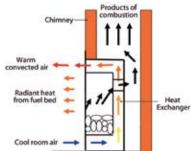

Open Fronted Plus

Open fronted HE fires provide the look and feel of a real open fire with net efficiencies of up to 74%. This type of fire provides both radiant and convected heat. Radiant heat is emitted from the coal or pebble fuel effect and the convected heat is generated by cool air drawn into the base of the fire which passes through a heat exchanger and is then emitted as warm air though the gap above the canopy.

Glass Fronted High Efficiency

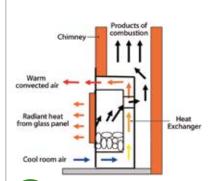

This type of high efficiency fire has a glass panel across the front of the fire which radiates the heat generated from the fuel effect directly into the room. The glass panel concentrates the radiant heat so that more heat is forced into the room and less is lost through the chimney. Combined with convected heat which is produced by cool air drawn into the base of the fire through the heat exchanger and then emitted as warm air though the gap above the canopy, this makes glass fronted HE's the most efficient conventional flue fires available.

Flavel has always had a reputation as a manufacturer of some of the most efficient fires on the market. Now we have set new industry standards with the introduction of the Flavel HE high efficiency range: exceptional heat output combined with lower running costs compared to standard gas fires.

Flavel's R&D team has invested in developing the technology to meet the key objective of producing gas fires that save energy and as a result, help to keep costs down.

Outset High Efficiency

Living Flame Effect

This type of fire sits on the hearth rather than being inset into the chimney. They are glass fronted and work much in the same way as any inset glass fronted fire but with glass panels on both the front and sides of the appliance there is a much larger area of radiant heat generated from the fuel effect.

Radiant

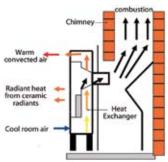

Outset radiant fires produce both radiant and convected heat. They feature ceramic radiant plaques instead of a coal or pebble effect fuel effect. As they suggest, the ceramic radiant plaques generate radiant heat which is emitted directly into the room. Convected heat is produced by cool air drawn into the base of the fire, through the heat exchanger and then emitted as warm air though the gap at the top of the heater.

Balanced Flue High Efficiency

Balanced flue fires are designed for those who want all the benefits of a gas fire but don't have a built in chimney or flue in their home. A balanced flue fire comes with its own flue terminal which is vented directly through an outside wall. They are glass fronted, completely room sealed appliances and work by drawing and venting external air via a pair of co-axial tubes into the fire for combustion purposes. The radiant heat generated from the fuel-bed combines with convected heat, which is produced by cool air drawn into the base of the fire through the heat exchanger and then emitted as warm air though the gap above the canopy, making balanced flues one of the most efficient types of gas fires available.

Guide to icons

Type of Chimney or Flue

The type of chimney or flue you have dictates the type of fire you can have. But if you're not sure, then take a look at your roof and compare it with the simple guide below. It's worth remembering that a full depth fire often requires a traditional chimney or rebate on the fire surround, whilst a slimline fire will fit virtually any chimney or flue.

Brick Chimney - Class 1 Flues

Apart from products designed for "no chimney" applications, all Flavel products will fit brick chimneys. They are easily recognisable by a chimney stack with accompanying terracotta pot or gas terminal.

Pre-Fabricated Flue - Class 2 Flues

Pre-fabricated flues are easily identifiable by a metal flue and terminal on the roof and a metal flue box behind the fire.

Pre-Cast Flue

Pre-cast flues can be identified by a ridge vent or metal flue tube and terminal on the roof. Constructed from concrete or clay blocks they form a rectangular section flue. All Flavel fires featuring this icon are only suitable for Pre-Cast flues conforming to BS EN 1858.

Controls

Manual Control

A simple and discreet control system located behind the fire's trim or fret on inset fires and the bottom right side on outsets.

Slide Control

Convenient control that eliminates the necessity of bending down.

Switch Control

Instant heat at the flick of a switch.

Top Control

A push down and twist ignition and control located on the top of outset fires means you don't have to bend down to light the fire.

Remote Control

The remote control handset is used to light the fire as well as adjust the flame height and heat output.

Electronic Flame

Semi Remote

Light the fire using the manual

control system then use the

remote control handset to

adjust the flame height and

Control

heat output.

Control

Discreet easy access buttons are used to ignite the fire and adjust heat and flame height.

Remote Control with Thermostat

The remote control handset can be used to light the fire as well as to adjust the flame height and heat output. In addition, the handset contains the extra benefit of a thermostatic control to regulate room temperature and a programmable timer that can be pre-programmed to ensure your room will be warm whenever you wish.

If you can't see a chimney or flue like the ones described on the left, then you will require either a Balanced Flue or a Powerflue

Powerflue

Powerflue fires use an electronically driven fan unit mounted on the external wall to expel the flue gases directly outside the building.

Balanced Flue

Balanced Flue fires use a horizontal pipe to vent directly outside. An electricity supply is not required for Balanced Flue products.

Power Supply

Your gas supply will either be natural gas or LPG, depending on the area in which you live.

Natural Gas

If you have a gas meter then you will have natural gas.

LPG

LPG is the most popular alternative to natural gas.

Electric

Simply plug in to your existing household electricity supply.

Online video

Wherever you see this symbol, use the QR code scanner app on your smartphone or mobile device to watch a short video of this fire.

Electronic Top or Side Control System

Both ignition and heat are controlled by a single rotary motion

Both ignition and heat are controlled by a single rotary motion to light the fire. These easy to use controls are now available on our best selling radiant outsets. Requires an AA battery.

Our Flavel gas fire guarantee

Strata brown Page 46

Every model* carries the peace of mind of a 7 year guarantee and the reassurance of the Flavel Airwatch System on all living flame effect fires. This device immediately cuts off the gas supply in the unlikely event of the flame being extinguished through blockage.

* Electric fires come with a 2 year guarantee

Our 7 year guarantee is subject to terms & conditions including annual services carried out by a Gas Safe Register engineer and annual replacement of the oxy-pilot assembly (or thermocouple on balanced flue models).

Calculating your Flavel gas fires running costs

RUNNING

Despite rising fuel prices, natural gas remains the most common and one of the cheapest ways to heat your home. Since the cost of gas can differ depending on service provider, location and tariff we do not include estimated running costs for our products. However, you can estimate your own running costs easily using the following calculation:-

Example

What is the running cost of the Windsor Traditional HE when used for 3 hours at a cost of 4.2p per kilowatt hour?

Windsor Traditional HE brass Page 19

Flavel Fires Efficiency Guide

Whether your home has a brick chimney, pre-fabricated flue or pre-cast (BS EN 1858) flue you will be able to choose any fire from pages 8 to 38. We offer a huge range of products from radiant outsets to hole-in-the-wall fires. Your choice will depend on both the look and performance which is most suitable for you.

We offer a wide variety of products and each one offers different levels of energy efficiency. Depending on the style you would like, the hours of use, and the initial price you would like to pay, the most efficient gas fire may not always be the correct choice for you.

We have created the efficiency guide below to help you discover which type of fire is most suitable for you. We have clearly labelled each fire in this brochure to allow you to quickly and easily identify the level of efficiency that you can expect from that model.

Ultra High Efficiency Gas Fires - Net Efficiency 76%+

Ultra High Efficiency gas fires are exceptionally efficient and offer the largest energy cost saving per kilowatt of gas used to run the fire. These products tend to be glass fronted, radiant outset fires or balanced flue models. For more information about each of these product types see pages 4 and 5.

High Efficiency Gas Fires - Net Efficiency 66% to 75%

High Efficiency gas fires are very efficient and offer both style and performance. Many of these products are open fronted convectors, referred to as 'Plus' models in this brochure. They give you the look and feel of a real fire with maximum heat output. This category also includes some outset radiant heaters. For more information please see pages 4 and 5.

Standard Efficiency Gas Fires - Net efficiency 50% to 65%

Standard Efficiency gas fires can be used as a secondary heat source in conjunction with central heating. These products are ideal if you are looking for a great fireplace feature for occasional use.

Decorative Gas Fires - Net Efficiency up to 49%

These fires should be purchased for decorative purposes only and not used as a primary or secondary heat source. They provide a stunning focal point and help to create the ambiance of a real fire.

See page 34

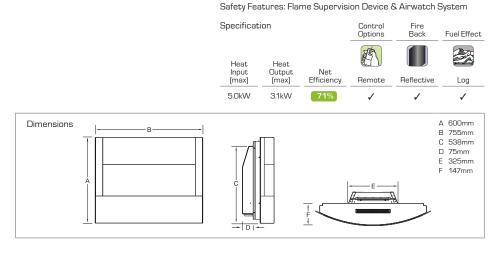

Pre-Fabricated Flue Pre-C

Castelle Slimline

The Castelle Slimline has been specifically designed to fit a standard Pre-Cast flue without compromising style and performance. It features a striking curved black glass fascia, framing a beautifully realistic log fuel effect and a fully automatic remote control system.

Finesse

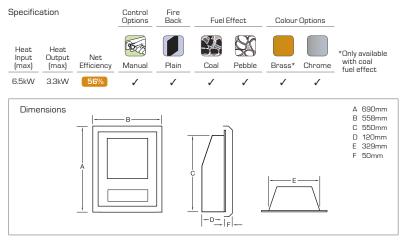

Brick Chimney

Pre-Fabricated Flue

Pre-Cast Flu

The most versatile hole-in-the-wall gas fire from Flavel. The Finesse will fit virtually any flue and is available in three different variations – a brass trim option with coal fuel effect to suit a classical setting and a chrome trim option with a choice of coal or pebble fuel effect.

Safety Features: Flame Supervision Device & Airwatch System

Finesse with coal fuel effect and chrome trim

Curve

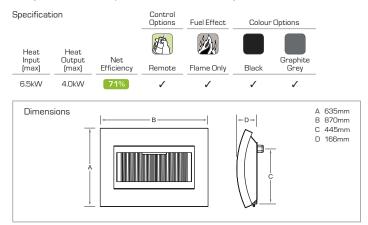

Brick Chimney

Pre-Fabricated Flue

Pre-Cast Flu

The Curve "hang-on-the-wall" fire with its sleek lines, textured fascia and glass front, complements the unique flame pattern created by an undulating back panel. This stunning fire is easy to install as it literally hangs on the wall, rather than slotting into the structure. The Curve is perfectly suited to contemporary homes requiring state-of-the-art appearance and the performance to match.

Safety Features: Flame Supervision Device & Airwatch System

Curve in graphite grey

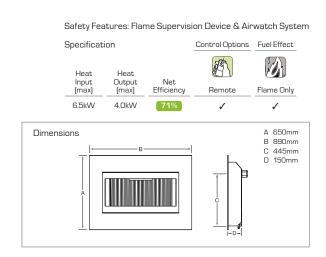

Kamina

The sleek black glass fascia on this "hang-on-the-wall" gas fire is perfectly complemented by the unique flame pattern created by an undulating back panel. Installation is virtually hassle free as this highly contemporary fire literally hangs on the wall, thereby minimising any costly or messy building work. With a maximum heat output of 4kW the Kamina is perfectly suited to contemporary homes requiring state-of-the-art appearance and performance.

Expression HE

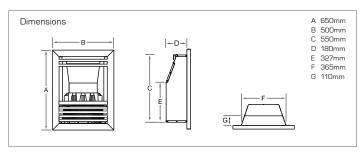

Brick Chimney Pre-Fabricated Flue

The Flavel Expression HE hole in the wall high efficiency gas fire is a contemporary and economical heating solution with a net efficiency of 78%. This fully glass fronted model features a stunning stainless steel fascia design and is operated by a fully automatic remote control system.

WARNING BFM Europe Limited is a Gas Safe Register company. We recommend that all of our fires are installed by Gas Safe Register engineers in accordance with our instructions, electric models by a competent person.

DISCLAIMER Our policy is one of constant development and improvement. We therefore reserve the right to revise designs and specifications of our products without formal notice, patents pending. We always recommend our products be viewed in an approved showroom before purchase.

Whilst we have taken every care in the preparation of this brochure it is not intended to replace the installation manual which provides more detailed information.

Photography is for illustration purposes only and although every effort has been made to ensure accurate reproduction of typical installations and flame pictures they may vary according to fire model and flue types.

We accept no liability for any loss or damage arising directly or indirectly from the use of this brochure.

We recommend that all our fires are used in conjunction with central heating and not as a primary source of heat.

In the interests of personal safety a suitable fireguard is recommended when children, the elderly and the infirm are present.

(This brochure is copyright 2016 and must not be reproduced in whole or in any part without prior written permission).

We would like to thank Kedleston Heating (01332 200303), Olde England Reproductions (01782 319350), Stanningley Firesides (0113 257 1512) and GB Mantles (01924 473243) for contributing fire surrounds to this brochure.

At the heart of your home
